

# WOMEN IN HEALTHCARE SECURITY NETWORK

## Mentorship Program

This program strives to foster professional and personal development for women in healthcare security by pairing together mentees and mentors in a safe and supportive environment.

### How everything works

Over the course of this 6-month program, mentors and mentees:

1. Participate in activities to address personal branding, work/life balance, interview prep, difficult discussions, networking, and more.
2. Gain access to books, professional development events, and other opportunities to spur professional growth.
3. Have one-on-one sessions between mentor and mentee to drill down and tackle specific areas of interest.

To foster the best outcomes possible, mentors and mentees will be paired based on their interests and strengths.

Note: there are a limited number of mentor and mentee matches that can be done per year. Applying for the mentorship program does not guarantee you'll be matched. Mentors can be female or male and don't need to be part of the network, Mentees are restricted to female network members. This program is volunteer-based and does not offer compensation for your time.
